

Acceleration ABCs - N is for Netscuse

Dawn Parzych, 2008-07-11

A [netscuse](#) is blaming the Internet for being unable to complete a task. In many instances an [application delivery controller](#) or [acceleration solution](#) can help eliminate these netscuses.

How many of these netscuses or something similar have you used or heard?

- I can't use the new self-service portal/application the pages take forever to load.
- When I went to submit my timesheet/take a course/pay a bill the site was down.
- The site is fine when using the corporate network but when I connect via my mobile it's just unusable.
- Our Internet connection has been flaky/erratic - must be too many people watching videos on [YouTube](#).
- If I could install and use [Chrome](#) on my work PC I would be able to get much more done in a day - sites seem to load faster with Chrome.

Got others, share them.
