

Application Auto Scaling Through BIG-IP Cloud Edition

Chase Abbott, 2018-05-07

Peanut butter is good and jelly is good. What happens when you bring those two together? BIG-IP 6 is the peanut butter, Per App VE is the jelly. Put them together and you get per application auto scaling. BIG-IP [supported auto scaling for a while](#) now but the use cases of dynamically deploying multiple instances of BIG-IP were few (based on individual application requirements). By deploying the BIG-IP Per App VE instead, you get a (marketing speak alert) lower cost deployment for customized ADC and security on a per application basis.

Our training team put together a great walk-through article for deploying auto scaling features with BIG-IP Cloud Edition. In our two videos we're deploying auto scaling functionality into VMWare and AWS infrastructures. For comparison go back and check out [Skies Never looked So Good With BIG-IP Cloud Edition](#) where we show the differences between AWS and VMWare tier 1 traffic distributors. But enough talk... Enjoy the walk-through. A [discussion in Q&A for BIG-IP Cloud Edition](#) is available if you have questions.
