

DevCentral Cloud Month - Week Two

Peter Silva, 2017-05-06

What's this week about?

You got a mini taste of [DevCentral's Cloud Month](#) last week and week two we really dig in. This week we're looking at Build and Deployment considerations for the Cloud. The first step in successfully deploying in a cloud infrastructure. Starting today, Suzanne and team show us [how to deploy an application in AWS](#); On Wednesday, Greg, harking the Hitchhiker's Guide, [explains Azure's Architectural Considerations](#); Marty uncovers Kubernetes concepts and [how to deploy an application in Kubernetes](#) this Thursday; on #Flashback Friday, Lori takes us down memory lane [wondering if SOA is still super](#). Filling my typical Tuesday spot, Hitesh reveals some foundational building blocks and philosophy of F5's cloud/automated architectures.

These will help get you off the ground and your head in the clouds, preferably [Cloud Nine](#).

Enjoy!
