

Exchange 2010 with F5 BIG-IP and Dell Article Published

Ryan Korock, 2010-06-08

Yesterday my esteemed colleague, Fred Johnson, posted a great article on Dell's Enterprise Technology Center about some joint F5 & Dell testing on Exchange 2010 that recently took place.

There are some architectural changes within the way Exchange 2010 is deployed that make having a hardware load balancer even more critical when trying to scale and provide high availability. This article discusses those changes, discusses the testing that was done, and also goes into depth on the results and finding from the testing. I highly recommend the article for anyone looking at migrating to Exchange 2010.
