

F5 and Ansible integration webinar - Technical deep dive

Payal, 2017-22-05

We had our first joint webinar with Ansible back in [March](#), which covered the basics of F5 and Ansible integration. Seeing the positive responses and interest in the integration F5 and Ansible have been working closely with partners and customers to understand their network infrastructure and application deployment automation needs. Based on customer feedback F5 has prioritized development of a number of Ansible modules which will help customers to achieve a more complete level of automation. Modules include creation of users, setting up SNMP traps, running TMSH commands on the BIG-IP, uploading iRules, application deployment using iApps to name a few.

Join us for our 2nd joint webinar with Ansible on Wednesday May 31st, 2017 from 11AM to 12PM PST where we will dig deeper into the integration and cover the following:

- Explain new F5 modules coming in Ansible 2.4 release
- BIG-IP administrative configuration tasks using the new modules
- Fast application deployment using F5 iApps ansible module
- Learn how customers are using Ansible in their environments.

Hear from an F5 and Ansible joint customer ([Surescripts](#)) on how Ansible is used to configure and manage F5 BIG-IP devices (LTM and DNS modules) in their environment.

Don't miss out! We are looking forward to sharing with you. [Click here to register](#)
