

F5's BIG-IP system with Oracle Access Manager

Peter Silva, 2009-06-10

Honestly, this was not timed and I actually had a different topic to discuss for #15 of [26 Short Topics](#) but this cool news today. F5 and Oracle have announced plans to unify access management for web applications. Press release can be found [here](#). The solution will combine F5's [BIG-IP system](#) with [Oracle Access Manager](#) to enhance single sign-on (SSO) capabilities and simplify access control.

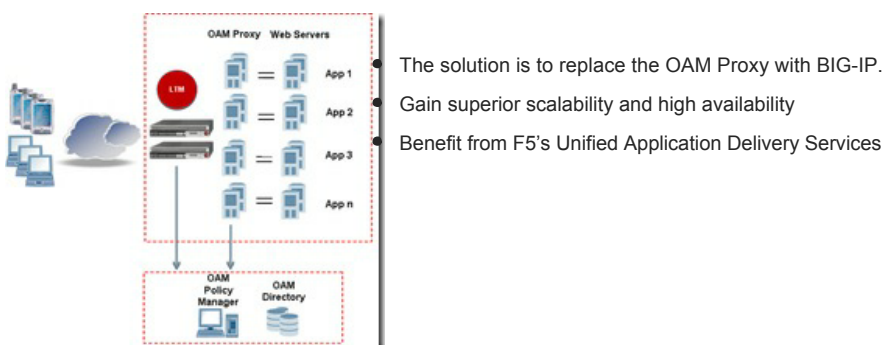

The Authentication Alternatives Today

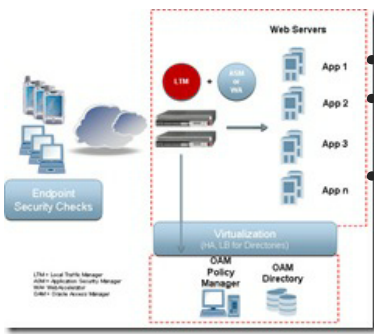

Specialized Access Proxies

- Don't scale as well
- Often inferior reliability
- More boxes for network operations

A Better Alternative: BIG-IP and OAM

Benefits of Oracle OAM & F5 BIG-IP Integration

- Reduced TCO and dramatically lowers deployment risk and streamlines operational efficiencies.
- Integration with OAM Single Sign-On (SSO) for superior end-user experience and enhanced user productivity
- Unified point of enforcement to simplify auditing and control changes in configuring application access settings

Unifying application delivery and web access management.

Availability in 1H2010 – More to come soon!
