

Lightboard Lessons: Connection Mirroring

John Wagnon, 2016-25-05

Have you ever been in the middle of a file transfer via FTP and the connection breaks and you have to go back and re-download the entire file? Frustrating, isn't it? The BIG-IP offers the capability of connection mirroring where one BIG-IP is serving up the goodness you want while another BIG-IP also keeps all the relevant connection information so that if the first BIG-IP fails for some reason, the other BIG-IP immediately takes over and keeps your connection alive and running. Your world just got rocked...in a good way!
