

Lightboard Lessons: IPS Passthrough

Jason Rahm, 2015-21-10

You've seen our Whiteboard Wednesday videos, but we are kicking it up a notch with our new "Lightboard Lessons" video series. In this video, Jason details a solution for an IPS passthrough, preserving the client to server encryption everywhere except the handoff to the inline IPS, which requires the traffic to be in the clear. It's a great solution that solves a unique problem and does it without the use of iRules! Instead, it relies on route domains and a vlan group to do the heavy lifting.

In addition to the video, you can [read about the specifics of the solution here](#).
