

Oracle Database – Improved security and performance with F5

Nick B, 2011-10-06

Just a quick one for F5 customers and partners...F5 and Oracle recently put out an eSeminar that looks at factors that can slow or prevent user access to enterprise applications and data, like database maintenance and data replication. It also deals with providing mobile users with fast, remote access while protecting the increasing amounts of data that travel over the web.

You can listen to it [here](#) (you'll need to spend a minute registering – or if you can't be bothered drop me a line for the full recording).
