

Podcast: SOA Security

Lori MacVittie, 2007-01-05

SOA Security is one of my favorite topics. Probably because it's SOA and it's security, two of my favorite topics. I've [written a lot in the past](#) about SOA and XML security, primarily around those products that provide SOA security but some just on the general nature of SOA, XML, and how inherently insecure these formats can be, so it's good to see that as SOA continues to gain speed that organizations are starting to think more seriously about how they're going to secure the services they're deploying.

I chatted with David Linthicum late last week on the topic, you can [listen to the podcast here](#) and check out some of David's discussions on his blog, [Real World SOA](#) on the broader topic of SOA in general, including some great insights on another difficult topic: SOA Governance.
