

This Space Almost Intentionally Left Blank.

Don MacVittie, 2010-11-05

I had just finished writing this blog and was about to post it, taking that moment to go do other things before one final read-through, and guess what? I saw [this article](#) on Dell's site cross my Twitter account. I'll blame the fact that I'm the shiny new Technical Marketing Manager as the reason I did not know this was going on. I thought about just ditching the blog at that point... After all, the article linked to on Dell's site is much more in-depth. But the blog was *done*. And I think it still adds value in the generic replication sense. So I leave it as-is. Though I suggest that if you're interested in speeding replications between EqualLogic boxes, or in how F5 specifically speeds up massive data transfers, the article linked above is worth a read also.
