

Virtualization is changing IT, what will change business?

Don MacVittie, 2010-22-06

Over the last several years, and for several more to come, virtualization and cloud are transforming the way that we implement IT. The purpose of the department is the same – to serve users in the best manner possible – but the agility with which that service can be offered has increased by a magnitude or more. Bringing up a brand-new server took weeks, now it is hours. The entire focus of Server Administrators shifted from hardware, so that it is a small part of what they do on a daily basis, the number of servers you can offer the business is now tenfold or one hundred fold what it was a few short years ago.
