

# Where have you used an SSL VPN?

**Dan Griffin, 2007-19-07**

---

Earlier this week I rode in a car from JFK airport in New York to Manhattan and synchronized about 20MB worth of email on the way. For some reason I thought this was more novel than using [FirePass](#) from an airplane.

The car was a [Toyota Prius](#) run by a company called [Ozocar](#). The car was equipped with satellite Internet access. I'm not sure which service they used - the driver didn't know. They had a Linksys wireless router connected to the satellite access so I was able to fire up my laptop and jump on the network while rolling through traffic. They also had a standard 110V power strip at the bottom of the back seat in case your battery was low. One quick double click on my handy dandy [FirePass VPN Tray Client](#) and I was connected to the mother ship and synchronizing all my mail from the flight! The setup worked like a champ until we got into the high rises in the city and the satellite service was spotty.

I thought it was a pretty neat set up.
