

# WhiteBoard Wednesday: SSL Renegotiation

**John Wagnon, 2015-30-09**

---

We all know that a client and a server have to negotiate a connection before they can talk securely via HTTPS. But, did you know that, in some cases, that same client and server will need to "renegotiate" their secure connection while they are still talking securely? In this video, John talks about SSL renegotiation and covers a new feature in the BIG-IP that helps protect web servers from potential asymmetric DoS attacks. Enjoy!
